Respiration Connection to Class

Content: In class we studied respiration and how it takes place in cells in order to create ATP. Plants use cellular respiration to turn food into energy.

Plants need this in order to survive.

The effect of temperature on the rate of cell respiration in the peas is that the higher the temperature, the higher the rate of cell respiration because the cool water causes the enzymes to slow down, causing the reactions of cellular respiration to slow down, and therefore the rate of respiration to be slower.
