Artificial Life An Overview Lagout
Artificial Life is the study of synthetic systems that exhibit behaviors characteristic of natural living systems. It complements the traditional biological sciences concerned with the analysis of living organisms by attempting to synthesize lifelike behaviors within computers and other artificial media.

Artificial Life examines its subject's dizzying philosophical implications: Is a self-replicating computer program any less alive than a flu virus? Are carbon-and-water-based entities merely part of the continuum of living things? And is it possible that one day "a-life" will look back at human beings and dismiss us as an evolutionary way ...

Artificial Intelligence is a way of making a computer, a computer-controlled robot, or a software think intelligently, in the similar manner the intelligent humans think. AI is accomplished by studying how human brain thinks, and how humans learn, decide, and work while trying to solve a problem, and then using the outcomes of this study as a ...

Artificial Life: An Overview - Google Books
Artificial life is a field of study wherein researchers examine systems related to natural life, its processes, and its evolution, through the use of simulations with computer models, robotics, and biochemistry. The discipline was named by Christopher Langton, an American theoretical biologist, in 1986. There are three main kinds of alife, named for their approaches: soft, from software; hard, from hardware; and wet, from biochemistry. Artificial life researchers study traditional biology by try

Overview of artificial life Life is an interconnected web of adaptive systems produced spontaneously by the process of evolution. Living systems exhibit impressively robust and flexible functionality at many levels of analysis.

The scientific and philosophical scope of artificial life
This overview is based on Langton's (1995) volume. Langton's book is in turn based on papers culled from the first three issues of the journal Artificial Life. Adami outlines this work so that it can be put aside - the rest of chapters in the book deal with his own approach using his own model (the Avidasystem).

Christoph Adami: Introduction to Artificial Life
Purpose. For a while now I have been thinking about using a Raspberry Pi with some sort of visual indicator as a form of artificial life simulator, I wanted to create something that would be able to spawn a number of entities that would have random properties and be able to move around and interact with each other, forming a sort of virtual ecosystem; and then experiment with it to see what ...
