There is unfortunately a limit to the time and to the efforts we can put in this solution manual and studying Bayesian Core requires some prerequisites in maths (such as matrix algebra and Rie- mann integrals), in probability theory (such as the use of joint and conditional densities) and some bases of statistics (such as the notions of inference, suf- ciency and condense sets) that we cannot cover here.

A. Consider the data and script you used for Exercise 8.1. Re-run it two ways: genMCMC(data=myData , numSavedSteps=2000) genMCMC(data=myData , numSavedSteps=50000) For both, include the diagnostic plot of theta[1] in your write-up. Explain what the numSavedSteps argument does, and describe its effect on the diagnostic plot. B.

After reading what Christian wrote about the solutions manual that he and his collaborator wrote for their Bayesian Core book, I'm reminded of my own efforts with the Bayesian Data Analysis solutions. Not long after the first edition of the book came out, nearly fifteen years ago, I wrote up solutions to fifty of the homework problems (out of a total of about 150).

Here are solutions to about 50 of the exercises from Bayesian Data Analysis. The solutions themselves haven't been updated; I just cleaned up the file: some change in Latex had resulted in much of the computer code running off the page, so I went in and cleaned up the files. I wrote most of these in 1996, and I like them a lot.
