Cancer management in man : chemotherapy, biological ...

Biological therapy for cancer is a type of treatment that uses the body's immune system to kill cancer cells. Biological therapy for cancer is used in the treatment of many types of cancer to prevent or slow tumor growth and to prevent the spread of cancer. Biological therapy for cancer often causes fewer toxic side effects than do other cancer treatments.

Biological therapy for cancer - Mayo Clinic

Cancer may be the result of a malfunction of the immune system, and biologic therapy can repair, stimulate, or enhance the immune response. Traditional cancer treatments, although effective, often have significant limitations. Biologics can target the cancer in a specific way and may work synergistically with chemotherapy to improve outcome.

The Use of Biologics in Cancer Therapy

Prostate cancer most commonly spreads to the bones and lymph nodes. It can also develop in the liver, brain, lungs and other organs. How is prostate cancer managed or treated? Some people never need treatment because the cancer grows slowly and doesn't spread. With treatment, most

Cancer Management in Man: Biological Response Modifiers, Chemotherapy, Antibiotics, Hyperthermia, Supporting Measures Hardcover – Sep 30 1989 by Paul V. Woolley (Editor)

Cancer Management in Man: Biological Response Modifiers ...

Cancer is a group of diseases involving abnormal cell growth with the potential to invade or spread to other parts of the body. These contrast with benign tumors, which do not spread. Possible signs and symptoms include a lump, abnormal bleeding, prolonged cough, unexplained weight loss, and a change in bowel movements. While these symptoms may indicate cancer, they can also have other causes.
