The atoms and molecules don't change, but the way they move about does.

Water, for example, is always made up of two hydrogen atoms and one oxygen atom. However, it can take the state of liquid, solid (ice), and gas (steam).

Matter changes state when more energy gets added to it. Energy is often added in the form of heat or pressure. Water

Liquids turn into gases if they are heated to their boiling point. Boiling and condensing > Deposition. Some unusual gases turn directly into solids when they are cooled down. This is known as deposition. Unusual changes > Sublimation. Some solids turn directly into gases when they are heated, without passing through a liquid state.
