Chapter 2 Solving Linear Equations

2.2: Use a General
Strategy to Solve
Linear Equations

Solving an equation is like discovering the answer to a puzzle. The purpose in solving an equation is to find the value or values of the variable that makes it a true statement. Any value of the variable that makes the equation true is called a solution to the

solution of linear equations. It is a problem in its own right, but it also occurs as a sub-problem for many other problems. For example, the solution of a nonlinear system is approximated through a sequence of solutions to linear systems; the discretization of a linear elliptic partial differential equation leads to the solution of a (highly structured)

Linear Equations -

Fairchild Wheeler ...

Almost all the execution time is spent in the statement $A(i,j)$

$= A(i,j) - A(i,k)*A(k,j);$

10 Chapter 2. Linear

Equations At the k th

step of the elimination,

i and j are index

vectors of length $n-k$.

The operation

$A(i,k)*A(k,j)$ multiplies

a column vector by a

row vector to produce

a square, rank one

matrix of order $n-k$.
