The Clinical Examination of the Nervous System

There are sections on neuroradiology, electroencephalography, electromyography, and cerebrospinal fluid examination, which are brief and are more fully covered in other texts. There is little emphasis on the analysis of neurological signs in neuroanatomical or neurophysiological terms. The most valuable sections are those which deal with the techniques of the neurological examination and the clinical interpretation of neurological signs.

The Clinical Examination of the Nervous System. | JAMA ...

Clinical Examination - Nervous System. History: current mental state: level of consciousness, orientation, memory (recent, long term), intellect, understanding, insight, thought content, behaviour, mood, hallucinations, delusions, prior injury, stroke, transient ischemic attack, headache, fits, faints, falls, dizziness.

Clinical Examination - Nervous System

A neurological examination is the assessment of sensory neuron and motor responses, especially reflexes, to determine whether the nervous system is impaired. This typically includes a physical examination and a review of the patient's medical history, but not deeper investigation such as neuroimaging. It can be used both as a screening tool and as an investigative tool, the former of which when examining the patient when there is no expected neurological deficit and the latter of which when exam

Neurological examination - Wikipedia

EXAMINATION OF THE PERIPHERAL NERVOUS SYSTEM Examination of this complex system is often viewed with trepidation by most students. This is due to a number of reasons and in particular; a clear understanding of the neuroanatomy, the application of clinical skills and the interpretation of findings.
