**DETERMINING DOSE AND CREATININE CLEARANCE:** 1. Use of total body weight (TBW) in underweight and non-obese patients is widely accepted. Use of ideal body weight (IBW) for determining the mg/kg/dose may also be considered. For obese patients dosage requirement may best be estimated using an adjusted body weight (ABW) of: IBW + 0.4 (TBW ...
Maintenance doses are dependent on clearance. Both should be adjusted according to the pharmacokinetic target associated with optimal bacterial killing, when known. The volume of distribution of some antibacterials is altered by critical illness or acute renal failure or both. Clearance by CRRT is dependent on the dose and mode of CRRT and the sieving or saturation coefficient of the drug ...
