Dmv Air Brake Guide

In a dual system, there are two separate air brake systems, each with its own lines, hoses, air tanks, etc., but both run by the same set of brake controls. Typically, one system (the primary system) controls the regular brakes on the rear axle(s), and the other system (the secondary system) controls the brakes on the front axle (and maybe one rear axle).

Page 1 of the Air Brakes Test Study Guide for the CDL

In an air brake system, air tanks have drains to remove accumulations of water and compressor oil. Allowing water and oil to accumulate in the system could cause damage to the brakes. more. 3. Air tank drains: Should not be used in cold weather. Are helpful to remove water and oil from the air tanks.
