To find code examples using Eclipse, you typically have to perform a search for a declaration or reference and then open each result in an editor. This quickly becomes cumbersome. Using Code Search's Ctrl+Alt+Shift+G shortcut while a Java element is selected will perform multiple lightning-fast searches at once.

Shortcuts for Searching in Eclipse | Codetrails

I just upgraded to Eclipse Kepler, the non-J2EE version. The HTML Editor is missing. I read elsewhere that I could install the "Web Page Editor", which I did, but the system now generates all kinds of errors when building my project. Apparently it can't find some JSF classes. I have no interest in using JSF.

How to add HTML Editor to Eclipse? - Stack Overflow

How to Use javaDoc to Document Your Classes. By Doug Lowe . A step remains before you can go public with your hot new class library or application: preparing the documentation for its classes. Fortunately, Java provides a tool called javaDoc that can automatically create fancy HTML-based documentation based on comments in your source files.

How to Use javaDoc to Document Your Classes - dummies

To create a new JavaFX FXML project using Eclipse, you must first create a new JavaFX project and then add a new FXML document to that JavaFX project. From the Eclipse IDE Main menu, select File, choose New, and then Other, as shown in Figure 2-1. Figure 2-1 Create a New File Description of "Figure 2-1 Create a New File"
