ISHIDA Scale Manuals and User Guides PDF Preview and Download

Ishida's multihead weighers use a computer combination weighing (CCW) system, which we were first in the world to use. The combination weighing system is based on the following procedure: 1. The product is distributed into groups of separate quantities, which are then individually weighed in their hoppers. 2. A computer calculates combinations of the weights in each hopper, and selects the combination which is nearest to, but not lower than, the set target weight.
