Part 4 of ISO 5167 covers three different manufacturing methods of classical Venturi tubes; as-cast, machined and fabricated. The general shape, Venturi profile, surface finish and bore requirements of Venturi for each of the three manufacturing methods are described in detail.

In ISO 5167 there are three choices for the tappings: 1. Flange tappings. They are used more frequently because it is one of the simplest configurations and it is not necessary to drill the pipe. The high pressure outlet (H) is located 1 inch (25.4 mm) before the plate and the low

An orifice plate is a thin plate with a hole in it, which is usually placed in a pipe. When a fluid (whether liquid or gaseous) passes through the orifice, its pressure builds up slightly upstream of the orifice: 85–86 but as the fluid is forced to converge to pass through the hole, the
