Magic Squares Puzzles [with solutions] | Teaching Resources

Each of these 3x3 magic square puzzles is solved by determining the values that make the sums all rows, columns and diagonals equal to the same value. The sum is referred to as the magic constant. For a 3x3 magic square, there is actually only one normal solution and all of the puzzles are derived from rotations or reflections of that puzzle. The normal variations of these puzzles (the 3x3 puzzles that contain only 1-9) will have a magic constant of 15.

3x3 Magic Square Puzzles - DadsWorksheets.com

A magic square contains the integers from 1 to n 2. The constant sum in every row, column and diagonal are called the magic constant or magic sum, M. The magic constant of a normal magic square depends only on n and has the following value: $M = n (n^2 + 1) / 2$

Magic Square - GeeksforGeeks

Magic squares are one of the simplest forms of logic puzzles, and a great introduction to problem solving techniques beyond traditional arithmetic algorithms. Each square is divided into cells, and the rules require that the sum of any row, column or diagonal in the square be the same.

Magic Square Puzzles - DadsWorksheets.com

Each solution contains the consecutive series of integers from 1 to 14. The sum of this series is 105. There are 7 lines with each number appearing in 2 lines, so the magic sum is $(2 * 105) / 7 = 30$.

Magic Star Examples - Magic Squares

Note that all magic squares use only consecutive numbers. Add them up then divide by three. This is the number you will get when you add the numbers in the square in any direction. 1+2+3+4+5+6+7+8...

How to Solve Magic Squares - Video & Lesson Transcript ...

My Solutions. I first need to determine my target sum. The sum of all the values 1 through 16 is 136. Dividing this result gives 34, which is my target sum for each row, column, and diagonal. I then make an array of the numbers 1 through 16: ... And the result is a 4x4 magic square: ...
