In this hands-on, minds-on activity, students use model chromosomes and answer analysis and discussion questions to learn about the processes of meiosis and fertilization. As they model meiosis and fertilization, students follow the alleles of a human gene from the parents' body cells through gametes to zygotes; thus, students learn how a person inherits one copy of each gene from each of his/her parents.

Meiosis I. Meiosis I segregates homologous chromosomes, which are joined as tetrads ( $2n$ ,  $4c$ ), producing two haploid cells ( $n$  chromosomes, 23 in humans) which each contain chromatid pairs ( $1n$ ,  $2c$ ). Because the ploidy is reduced from diploid to haploid, meiosis I is referred to as a reductional division. Meiosis II is an equational division analogous to mitosis, in which the sister chromatids are ...
