Wikipedia

The magnetic field induces electricity in the NFC tag, which doesn't have its own power supply -- it's a passive NFC tag. This creates a radio field. The radio field generated by the tag interacts with the field generated by your phone. The NFC chip in your phone detects and decodes the radio field.

Field Communication.

NFC is a set of standards that allow smartphones and other devices to communicate via radio signals when they are held in close proximity. NFC works similarly to RFID, although NFC has a much shorter range than RFID. NFC's range is about 4 inches, making it harder to eavesdrop on.
