The solar wind consists of charged atoms and electrons, and an associated magnetic field. It fills a huge volume of space around the Sun, the heliosphere. The stormy solar wind has many direct and indirect effects on the Earth. It also interacts with a breeze of alien atoms that blows through the Solar System, coming from interstellar space.

The Astrophysics Science Division conducts a broad program of research in astronomy, astrophysics, and fundamental physics. Individual investigations address issues such as the nature of dark matter and dark energy, which planets outside our solar system may harbor life, and the nature of space, time, and matter at the edges of black holes.
