Space Filling Curves An Introduction

In mathematical analysis, a space-filling curve is a curve whose range contains the entire 2-dimensional unit square. Because Giuseppe Peano was the first to discover one, space-filling curves in the 2-dimensional plane are sometimes

Filling Curves | Kyle Byrne ...

This is a gentle introduction to space filling curves. Emphasis is on the representation, implementation and application in computer science. A situation where they are useful is an (adaptive) subdivision scheme that is represented by a tree, and the space filling curve will then have to visit all the

Exploiting Space-Filling Curves provides an overview of classical and new results pertaining to the usage of space-filling curves in global optimization. The authors look at a family of derivative-free numerical algorithms applying space-filling curves to reduce the dimensionality of the global optimization problem; along with a number of

In contrast, the space-filling curves are continuous but not one-to-one. Although each point on the line is associated with a unique point in the square, a point in the square can map back to multiple points on the line. A conspicuous example is the center of the square, with the coordinates $x = 1/2, y = 1/2$.
