I use Apache Tika which identifies the filetype using magic byte patterns and globbing hints (the file extension) to detect the MIME type. It also supports additional parsing of file contents (which I don't really use). Here is a quick and dirty example on how Tika can be used to detect the file type without performing any additional parsing on the file:

### **Identifying file type in Java - Stack Overflow**

Set file type associations. CLion recognizes a default set of file types. Such files are parsed and highlighted according to the syntax of the corresponding languages. If you are working with a file type that CLion does not recognize (for example, if it's a proprietary in-house developed file type) you can also create a custom file type. ...
