Underfloor Air Distribution Design Guide

The development of this design guide on underfloor air distribution (UFAD) is the result of a cooperative research agreement between the American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (ASHRAE), and the Center for the Built Environment (CBE) at the University of California, Berkeley, for ASHRAE Research Project RP-1064.

Underfloor air distribution technology - Designing Buildings

Underfloor air distribution (UFAD) systems are a hybrid of displacement and mixing ventilation systems, and are specifically designed to mix the occupied zone—the first 6 ft [1.8 m] of the room—allowing air to stratify above this point.

SECTION I - Price Industries

HVAC OVERVIEW OF THE UNDERFLOOR AIR DISTRIBUTION (UFAD) An Underfloor Air Distribution (UFAD) system uses the open space below a raised floor system to deliver conditioned air to supply outlets located in the floor. It is best to think of an UFAD as an upside down alternative to conventional overhead (OH) air distribution.

HVAC Overview of Underfloor Air Distribution (UFAD)

Underfloor air distribution is an air distribution strategy for providing ventilation and space conditioning in buildings as part of the design of a HVAC system. UFAD systems use an underfloor

Underfloor Air Distribution: Lessons Learned

The design of UFAD systems takes into account the same loads as conventional HVAC systems. However, because UFAD systems rely on convection from heat sources in an occupied zone, the thermal load they are expected to remove is calculated only to a height of 6 ft.
